

Mousa Amiri Motlagh

Backend Developer — .NET / C#

mousaamiri.code@gmail.com | mousaamiri.ir | github.com/mousaamiri

SUMMARY

Self-taught backend developer with a background as a mathematics teacher, focused on building maintainable, well-structured backend systems. Skilled in Clean Architecture, Domain-Driven Design, and CQRS, with experience across both server-side (ASP.NET Core) and desktop (WPF) application development. Comfortable leveraging AI tools to accelerate coding and software development, with a strong emphasis on testability and clean data access design.

TECHNICAL SKILLS

Languages & Frameworks: C#, .NET 8/10, ASP.NET Core, WPF

Databases & ORM: PostgreSQL, SQL Server, Entity Framework Core

Architecture & Design: Clean Architecture, Domain-Driven Design (DDD), CQRS, Outbox Pattern, Repository Pattern, Unit of Work, MVVM, Layered Architecture

Practices & Tools: Test-Driven Development (TDD), Docker, Git, MahApps.Metro

PROJECTS

Vitastic — Online Learning Platform (Personal Project)

GitHub: github.com/mousaamiri/vitastic | Stack: ASP.NET Core, C#, PostgreSQL

- Designed and implemented the backend of an online learning platform using Clean Architecture, separating Domain, Application, and Infrastructure layers to keep business logic independent of frameworks and databases.
- Applied Domain-Driven Design (DDD) to model core business concepts as rich domain entities rather than simple data containers.
- Implemented CQRS to separate read and write responsibilities, improving code organization and enabling independent optimization of queries and commands.
- Implemented the Outbox Pattern to ensure reliable event publishing alongside database transactions, preventing inconsistency between the database and downstream consumers.
- Built the data access layer with Repository and Unit of Work patterns over PostgreSQL for clean separation and testability.

Wazhechin — Desktop Library Management System (Personal Project)

GitHub: github.com/mousaamiri/wazhechin | Stack: WPF, C#, SQL Server

- Built a desktop library management application in WPF using the MVVM pattern to fully decouple UI from business logic.
- Practiced Test-Driven Development (TDD) throughout the project, writing unit tests before implementation to guide design and enable safe refactoring.
- Implemented Repository and Unit of Work patterns over SQL Server for a clean, testable data layer.
- Followed a Layered Architecture to enforce separation between presentation, business, and data concerns.
- Used MahApps.Metro to deliver a polished, modern desktop UI.

Portfolio — Personal Website (Personal Project)

GitHub: github.com/mousaamiri/Portfolio | Stack: ASP.NET Core

- Built and deployed a personal portfolio website with ASP.NET Core to showcase projects and technical background.
